TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C++, SQL

Backend & APIs: REST API design & development, Microservices, FastAPI, Node.js, Express.js

Databases: MySQL (relational), MongoDB, Firestore (NoSQL)

Cloud & DevOps: Google Cloud Platform, Git, GitHub, Jenkins, Docker, Linux, Postman, CI/CD pipelines

Engineering Practices: Agile/Scrum, Sprint Planning, Code Reviews, Unit & Integration Testing, SDLC

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design

EXPERIENCE

Software Engineering Intern | Jan 2026 - July 2026 (6 months)

BigBasket (A Tata Enterprise), Bengaluru, India

Project: BB Help - AI-Powered Internal IT Support Assistant

- Participated in user-story analysis and sprint planning as a core member of an agile team, translating business requirements into REST APIs for BB Help, a production RAG backend service (FastAPI, Python) serving 1,500+ internal stakeholders.
- Reduced escalation load on L1 support teams by building and deploying a live automation system with a structured knowledge base from 70,000+ historical helpdesk tickets and Root Cause Analysis mapping.
- Cut manual roster-lookup time by developing, testing, and code-reviewing backend workflows integrated with Google Workspace Chat, supporting defect resolution for high-severity on-call operations.
- Improved deployment reliability by authoring runbooks and technical documentation, and debugging production workflows with cross-functional IT and engineering teams.

PROJECTS

KOOLNOTES | Next.js, Node.js, TypeScript, MongoDB (2025)

- Built a customer-facing, AI-powered note-sharing web application with intelligent search, automatic summarization, and keyword extraction.
- Engineered scalable RESTful backend APIs with JWT-based authentication and a web-enabled data pipeline optimized for multi-user workloads.
- Integrated conversational Q&A capabilities over stored notes, increasing user engagement and knowledge reuse.

KWICK | React Native, Expo, Node.js, MongoDB (2024)

- Developed a customer-facing service-marketplace application for iOS and Android using React Native, connecting users with service providers via real-time booking-status updates and provider-matching logic.
- Integrated Google Maps APIs for live location tracking, turn-by-turn navigation, and distance-based service matching; implemented push notifications to reduce booking drop-offs.
- Designed modular backend services for booking-lifecycle management, availability scheduling, and user operations.

ADVO-KIDS | React, Next.js, Node.js, REST APIs, MongoDB (2023)

- Built a web-enabled, gamified legal-education platform for children with interactive quizzes and progress tracking; engineered a role-based backend with secure REST APIs, shipped as part of a multi-member team.
- Open-source highlight: DuoFold / Duo-animation (Kotlin, Jetpack Compose, AGSL) - 183 stars, 28 forks on GitHub.

EDUCATION

B.Tech - Information Technology (2022 - 2026)

Chandigarh Engineering College, Landran (Punjab Technical University) | CGPA: 8.96 / 10

CERTIFICATIONS

Career Essentials in Generative AI (Microsoft & LinkedIn) | Generative AI: Working with Large Language Models | Agentic AI: Build Your First Agentic AI System | AWS Cloud Foundations | MongoDB Certification | NPTEL - Database Management Systems | Data Engineering Fundamentals | Infosys Springboard - Software Engineering | Infosys Springboard - Java Programming

ACHIEVEMENTS & LEADERSHIP

- Shipped a production backend system used daily by 1,500+ employees within 6 months of starting an internship, owning the work end-to-end from design through deployment.
- Smart India Hackathon Participant - competed nationally among thousands of teams, delivering a working solution under competition time pressure.
